DIRECTION FOR USING DISC BRAKE PAD

CAUTION FOR SAFEKEEPING

Please avoid being exposed to direct sunlight or high temperature place.

Please do not throw, drop or use too violently.

Please stay away from grease and gas smelled place.

Please do not touch the abrasive surface with the hand stained with grease.

CAUTION FOR INSPECTION

Proceed with regular check after running 20000-30000KM.

Please proceed with regular check after running one-two years.

Please check when there is noise occurred.

Please check if one of the wheels is not working.

DIRECTION FOR USING DISC BRAKE PAD

CAUTION FOR REPLACEMENT

TECHNICAL INFORMATION

1. DISC/DRUM MACHING & PREPARATION	1. Machine disc/drum using the slowest feed rate. Do not use heavy cuts. The final cut should be minimal depth to minimise any grooving on the surface. 2. After machining, clean it with 240 grit emery on both surfaces to obtain a smooth non-directional surface finish.
2. CLEANING	Machining may leave a fine film of graphite on the surface. Always clean down the surface using methylated sprits after machining. After fitting, once again wipe down the disc.
3. BEDDING-IN PROCEDURE	To minimise the performance of brake pads, it is essential that they are bedded in correctly as follows. 1. Accelerate vehicle to 50 km/h 2. Apply brakes using moderate to firm pedal effort, reducing speed to 5 km/h 3. Drive 200m -300m accelerating to 50 km/h 4. Repeat steps 1 to 3 between 8-10 times

DIRECTION FOR USING DISC BRAKE PAD

CAUTION FOR INSTALLATION

Please make sure the exact Item No. for the car.

Please don't take out Brake Pads from the Box before replacement.

Please don't stain the Abrasive Surface with grease or oil.

Remember---

Please inspect the Disc and Caliper before replacement.

Please push back the Piston completely before replacement.

It's ok to assemble the Loose Replacement for small components, such as shim.

Please make sure there's no Air in the Hydraulic System.

Please fasten the Bolts tight when replacing.

Please make sure installing in the exact position.

Please make sure there's no Vibration on Rotor.

BRAKE PAD & SHOE SELECTION GUIDE

BRAKE PAD

	FRICITION MATERIAL	APPLICATION	FEATURE
SEM	Semi-Metallic 100% Asbestos Free	Light to Heavy-Duty Vehicles, Passenger Cars & Light Trucks, SUV	Quiet Operation, High Temperature Resistance
LOM	Low-Metallic 100% Asbestos Free	Frequent Braking for Passenger Cars, Light Trucks, 4WD	Long Duration, Wear & Fade Resistance
NAO	Non-Asbestos Organic	Suitable for All Kinds of Vehicles	Low Noise, Low Dust, Extended Life
CEM	Ceramic	Suitable for All Kinds of Vehicles, Especially Performance One	Ultra Quiet, Low Dust, Quick Recovery From Fade

BRAKE SHOE

	FRICITION MATERIAL	APPLICATION	FEATURE
NAO	Non-Asbestos Organic	Suitable for All Kinds of Vehicles	Low Noise, Low Dust, Extended Life

GENERAL BRAKE PROBLEMS

BRAKE NOISE

Brake should operate with minimal amount of noise. However excessive squeal, screech, groaning grinding chatter or rattle means your brakes need attention.

Probable Cause	Corrective Action
Extremely rough rotor surface	Regrind rotors
Worn pads or linings	Replace with new pads or linings
Twisted brake shoe	Replace brake shoes
Weak or broken spring components	Replace with new springs
Drums out of round	Turn or replace drums
Loose wheel bearing	Adjust or replace faulty parts
Foreign particles embedded in material	Replace with new pads or linings
Faulty caliper alignment	Readjust
Too much lateral run out of rotor	Correct runout to manufacturers specs.

BRAKE VIBRATION

Brake pedal, steering wheel or entire wheel shakes, vibrates or pulsates when brake is applied

Probable Cause	Corrective Action
Rotor run out and parallelism	Resurface disc brake rotors
Wear in steering and suspension components	Examine and replace worn components
Wheels out of balance	Wheel balance required

BRAKE WEAR

Premature wear can be caused by a number of faults in the brake system. To avoid costly repairs have the brakes checked at least once a year.

Probable Cause	Corrective Action
Wrong type of pad or lining material for operating conditions	Replace with correct pad or lining material for application
caliper pistons and/or pins seized	Fit pin and seal kits
extremely rough rotor surface	Regrind rotors

IMPORTANT REMINDER

Changing brake pads is a simple job but there are few important things, which we introduce in former pages, usually missed or forgotten by installers, which can lead to noise, vibration and wear occurred. The most important of all is the DISK/DRUM Machining.

If rotor surface is uneven or damaged or has grooves over 0.3mm depth, it needs to be skimmed or turned by using an on-car lathe or taking to work shop, otherwise, your new brake pads will not have a proper contact with rotor surface and that will lead to noise, vibration and fast wear out.

If rotor is in good condition, it's still important to sand the surfaces on both sides lightly with sandpaper to smooth the surface and remove any residue or pad adhesive that was left from the old brake pads which could contaminate the new pads. An orbital sander works well for this job, since it gives the rotor a non-directional finish recommended by most car manufacturers.

PART NUMERIC CODE

(1)

CD-DISC BRAKE PAD
CS-DRUM BRAKE SHOE

(2)

1 NISSAN	6 MITSUBISHI
2 TOYOTA	7 SUBARU
3 MAZDA	8 OTHERS(EUROPEAN,AMERICAN,KOREAN CAR)
4 ISUZU	9 SUZUKI
5 HONDA	0 DAIHATSU

(3)

INDICATES MFG. NUMBER

(4)

M - W / WEAR SENSOR
W - W / WEAR INDICATOR WIRE
S - W / SHIM
ACS - W / ACCESSORY(SAME AS OEM)
A or B - DIFFERENT LENGTH OR BONDING POSITION OF LINING ON SHOE
10,20~90 - DIFFERENT THICKNESS OR SLIGHT DIFFERENCE IN THE SHAPE WITH THE ORIGINAL NO. ON PAD

MEASUREMENT FOR DRAWING

DISC BRAKE PAD

A. Prefix 1,2,3,4,5,6,7,9,0 總長&總寬

B. Prefix 8

DRUM BRAKE SHOE

C - Lining Width
R - Radius
